Week 3

Posted May 19, 2025 5:00 AM

This week we look at process modeling. Process modeling involves creating visual representations of business processes to capture the flow of information through the system. The textbook reading covers the creation of data flow diagrams, a tool for understanding and documenting the flow of data through a system.

Process Modeling

<https://6sigma.us>

For this week's assignment, you are given a data flow diagram for a process model and are asked to think about how it applies to a given scenario. There is no template for this assignment, however you will submit a Word document with your responses to the prompts given. Please organize your document into four distinct sections, labeled accordingly, that address each of the prompts in the assignment.

There is also a discussion for this week. Be sure to post your initial post by the end of the day on Thursday, and respond to at least two other students' initial posts by Sunday.

Note that Project One will be due in week 5. Information is included in this week's module. Pay particular attention to the Model Application Short Paper of this project as you should begin work on this part of this project.
