# Module Two Announcement

Posted Nov 3, 2025 12:01 AM

Welcome everyone to Module Two of CS-320 Software Test Automation and QA,

We are diving deeper into Software Testing Techniques this week. You might be saying to yourself: "I don't need to learn testing as I'm a developer and will never do testing."

Image by Freepik

Well, the fact is that we all do testing - everyone on the team. If done right, testing is an activity that will take the team (developers included) twice as long as does the initial coding. If this effort is not put forth by the team, then your customers will do the testing for you or you will have poor quality. Neither is a good thing for your customers.

For this week, here is the work to complete

1. Read Chapters 3 and 4 of Software Testing: An ISTQB-BCs Certified Tester Foundation Guide

2. Participate in the Class Discussion: Continuous Integration
3. Complete the Quiz.
4. Complete your Journal assignment: Dynamic and Static Testing
5. Review Projects One and Two if you have not already done so.

I will be grading your Module One discussion posts and journals this week.

Please post questions to General Questions in the Discussions Forum.

For personal issues reach out to me via email, txt, or What's App (208-371-7427).
